REMARKS

Claims 1-22 are pending in this application.

The Office Action rejects, under 35 U.S.C. § 102, claims 1-6, 8, 9, 12-17, 21, and 22 over Barvesten (U.S. Patent No. 6,714,802 B1). The Office Action also rejects, under 35 U.S.C. § 103, claim 7 over Barvesten and Riddiford (U.S. Patent No. 6,587,675), claims 10, 18, and 19 over Barvesten and Steele et al. (U.S. Patent Application Pub. No. US 2004/0110490 A1), and claims 11 and 20 over Barvesten and Rolnik et al. (U.S. Patent Application Pub. No. US 2003/0207701 A1). These rejections are respectfully traversed.

Applicants assert that Barvesten does not disclose or suggest a housing having an exterior, the exterior including a first face side and a second face side, the second face side located on an opposite side of the housing from the first face side, a numeric keypad disposed on the first face side, and a text keypad disposed on the second face side, as recited in independent claim 1.

"A claim is anticipated only if each and every element as set forth in the claim is found, either expressly or inherently described, in a single prior art reference" (MPEP §2131, citing *Verdegaal Bros. v. Union Oil Co. of California*, 2 USPQ2d 1051, 1053 (Fed. Cir. 1987)).

Barvesten discloses a mobile communication apparatus that has a main apparatus housing, a first user interface with a first keypad and a first display, and a second user interface with a second keypad and a second display, where the second keypad and the second display are detachably connectable to the main apparatus housing of the portable communication apparatus (col. 2, lines 61-67). The objects of the invention are achieved by the provision of an accessory device for a portable radio telephone of the above type, where the accessory device has a device housing comprising first and second housing portions, a second keypad is provided in the first housing portion, a second display is provided in the second housing portion, engagement means are provided for physically and operatively connecting the accessory device to the radio telephone (col. 3, lines 1-8).

In particular, Barvesten discloses a portable communication apparatus 1 (also referred to as mobile telephone 1) having an apparatus housing 10 including a display 13 and a numeric telephone keypad 16 (Fig. 1 and col. 3, lines 30-45). Barvesten also discloses a separate

Serial No. 10/602,953

Page 7

accessory device 2 that includes a keyboard 22 and a display 32. The accessory device 2 is detachably inserted into an accessory connector 15 of the mobile telephone 1 (Fig. 1 and col. 4, lines 1-17). Barvesten clearly does not disclose the single claimed housing with two face sides including a numeric keypad on the first face side and a text keypad on the second face side opposite of the first face side. In particular, Barvesten discloses two separate housings. Consequently, the keyboard 22 is not disposed on a second face side of the housing 10 opposite from a first face side of the housing 10 including the keypad 16. In particular, the keyboard 22 is disposed on the accessory device 2, not on a second face side opposite a first face side of the housing 10.

Furthermore, Barvesten does not disclose a housing exterior including the first face side having a numeric keypad and the second face side having a text keypad. In particular, the accessory device 2 is foldable between a closed position and an open position (Figs. 2 and 3 and col. 4, lines 19-20). The keyboard 22 is clearly illustrated in Fig. 2 as being disposed in an interior section of the accessory device 2 and is only exposed when the accessory device 2 is open. Therefore, Barvesten does not disclose a housing exterior including the first face side having a numeric keypad and the second face side having a text keypad.

Thus, Barvesten does not disclose or suggest a housing having an exterior, the exterior including a first face side and a second face side, the second face side located on an opposite side of the housing from the first face side, a numeric keypad disposed on the first face side, and a text keypad disposed on the second face side, as recited in independent claim 1.

Applicants also assert that Barvesten does not disclose or suggest a unitary housing including a first face side and a second face side, the second face side facing an opposite direction from the first face side, a user interface including a numeric keypad disposed on the first face side, and a text input device disposed on the second face side, as recited in independent claim 12.

In particular, Barvesten discloses a portable communication apparatus 1 (also referred to as mobile telephone 1) having an apparatus housing 10 including a display 13 and a numeric telephone keypad 16 (Fig. 1 and col. 3, lines 30-45). Barvesten also discloses a separate accessory device 2 that includes a keyboard 22 and a display 32. The accessory device 2 is

Serial No. 10/602,953

Page 8

detachably inserted into an accessory connector 15 of the mobile telephone 1 (Fig. 1 and col. 4, lines 1-17). Barvesten clearly does not disclose the claimed unitary housing with two face sides including a numeric keypad on the first face side and a text keypad on the second face side opposite of the first face side. In particular, Barvesten discloses two separate housings. Consequently, the keyboard 22 is not disposed on a second face side of the housing 10 opposite from a first face side of the housing 10 including the keypad 16. The keyboard 22 is disposed on the accessory device 2, not on a second face side opposite a first face side of the housing 10. Therefore, Barvesten does not disclose the keyboard 22 and the keypad 16 on a unitary housing.

Thus, Barvesten does not disclose or suggest a unitary housing including a first face side and a second face side, the second face side facing an opposite direction from the first face side, a user interface including a numeric keypad disposed on the first face side, and a text input device disposed on the second face side, as recited in independent claim 12.

Applicants further assert that Barvesten does not disclose or suggest a candy-bar style housing having a first face side and a second face side, the second face side on an opposite side of the housing from the first face side, means for inputting numbers coupled to the first face side, and means for inputting text coupled to the second face side, as recited in independent claim 21.

In particular, Barvesten discloses a portable communication apparatus 1 (also referred to as mobile telephone 1) having an apparatus housing 10 including a display 13 and a numeric telephone keypad 16 (Fig. 1 and col. 3, lines 30-45). Barvesten also discloses a separate accessory device 2 that includes a keyboard 22 and a display 32. The accessory device 2 is detachably inserted into an accessory connector 15 of the mobile telephone 1 (Fig. 1 and col. 4, lines 1-17). Barvesten clearly does not disclose the single claimed candy-bar housing with two face sides including means for inputting numbers on the first face side and means for inputting text on the second face side opposite of the first face side. In particular, Barvesten discloses two separate housings. The keyboard 22 is not disposed on a second face side of the housing 10 opposite from a first face side of the housing 10 including the keypad 16. The keyboard 22 is disposed on the accessory device 2, not on a second face side opposite a first face side of the housing 10.

Serial No. 10/602,953

Page 9

Furthermore, Barvesten does not disclose a housing exterior including the first face side having means for inputting numbers and the second face side having means for inputting text. In particular, the accessory device 2 is foldable between a closed position and an open position (Figs. 2 and 3 and col. 4, lines 19-20). The keyboard 22 is clearly illustrated in Fig. 2 as being disposed in an interior section of the accessory device 2 and is only exposed when the accessory device 2 is open. Furthermore, the fact that the accessory device 2 can be opened and closed illustrates how Barvesten discloses a flip style housing for the keyboard 22, not a candy-bar style housing.

Thus, Barvesten does not disclose or suggest a candy-bar style housing having a first face side and a second face side, the second face side on an opposite side of the housing from the first face side, means for inputting numbers coupled to the first face side, and means for inputting text coupled to the second face side, as recited in independent claim 21.

Therefore, Applicants respectfully submit that independent claims 1, 12, and 21 define patentable subject matter. The remaining claims depend from the independent claims and therefore also define patentable subject matter. Accordingly, Applicants respectfully request the withdrawal of the rejections under 35 U.S.C. § 102 and 35 U.S.C. § 103.

CONCLUSION

Based on the foregoing amendments and remarks, Applicants respectfully submit this application is in condition for allowance. Favorable consideration and prompt allowance of claims 1-22 are earnestly solicited.

Should the Examiner believe that anything further would be desirable in order to place this application in better condition for allowance, the Examiner is invited to contact Applicants' undersigned representative at the telephone number listed below.
